B. Fundamental principles for official statistics and strengthened national statistical systems

1. Any comments on the content of the Collective Vision?
 - Content is acceptable and clear
 - Politicians and data users may not have a clear understanding regarding system wide quality assurance frameworks.

2. What are the collaborative activities (regional or sub-regional) that can support national efforts in reaching the signposts?
 - Publicize the meaning and importance of the UN fundamental principles of statistics to policy makers and society
 - Needs assessment of statistical systems can be done on regional and sub regional level
 - Development of NSDS and incorporation of the SDGs in policy documents and work plans
 - Joint Projects can be implemented to cover gaps and methodology and development of practical IT tools.
 - Political and financial support can be provided at national level

3. What in particular can statisticians, planners or UN teams do to implement the Collective Vision?
 - Statisticians are responsible to producing and disseminating reliable and quality statistical data and developing quality assurance system.
 - Planners could define outputs and support the strategy development and the implementation of goals and targets
 - UN team could make progress/process assessments at the regional and sub regional levels and make recommendations, support capacity building by providing technical assistance and development of methodology

E. Skills and human resources

1. Any comments on the content of the Collective Vision?
 - The content is OK

2. What are the collaborative activities (regional or sub-regional) that can support national efforts in reaching the signposts?
 - There would be capacity building activities such as training and knowledge and practical experience exchange

3. What in particular can statisticians, planners or UN teams do to implement the Collective Vision?
 - Planners should provide necessary resources, recommendation and technical assistance to statisticians, create monitoring system with stakeholders.
 - Statisticians have to increase internal skills according to the users needs.
 - UN should provide recommendations considering global monitoring and give technical assistance and developing guidelines and reference documents
