

Guidelines SBR Frame Methodology (Ch8)

Chiba, 7 - 11 - 2016

GSBPM

1.4 Identify concepts

$$(1) N_{\text{entries}}(P_2) = N(P_2) \setminus N(P_1)$$

$$(2) N_{\text{exits}}(P_1) = N(P_1) \setminus N(P_2)$$

$$\Rightarrow N(P_2) = (N(P_1) \setminus N_{\text{exits}}(P_1)) \cup N_{\text{entries}}(P_2)$$

$$(3) Y(P) = Y(P_1) + Y(P_2)$$

$$\Rightarrow Y(P_2) = Y(P_1) + [(Y(P_2) - Y(P_1)) / Y(P_1)] * (Y(P_1))$$

"Level t = Level t-1 + Growth"

N = Population of statistical units

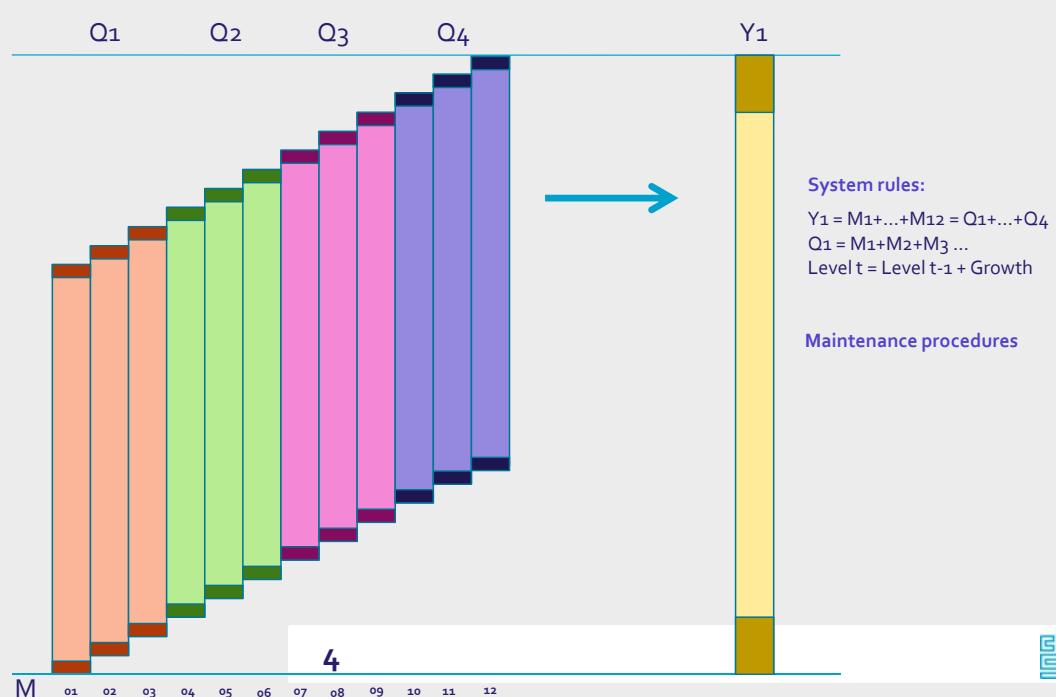

Y = Additive target variable

P = Reference Period

3

Concepts in population frames

2.1 Design outputs

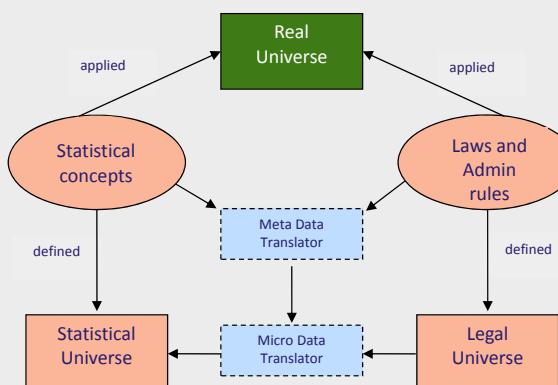

Unit	Application
Legal unit (LU)	Bankruptcies
Enterprise Group (EG)	Financial flows
Institutional Unit (IU)	National accounts
Enterprises (ENT)	Profit-loss, balance/production
Local Unit (LOU)	Local employment
Kind of Activity Unit (KAU)	Employment /single activity
Local KAU (LKAU)	Local employment /single activity
Unit of Homogeneous Production (UHP)	Functional Statistics
Local UHP (LUHP)	Local functional Statistics

5

2.3 Design data collection methodology

Relationships between the 'universes'

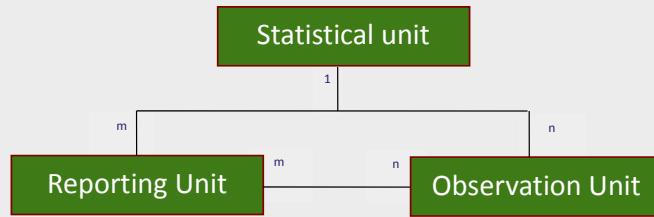

6

Relevant units for data collection

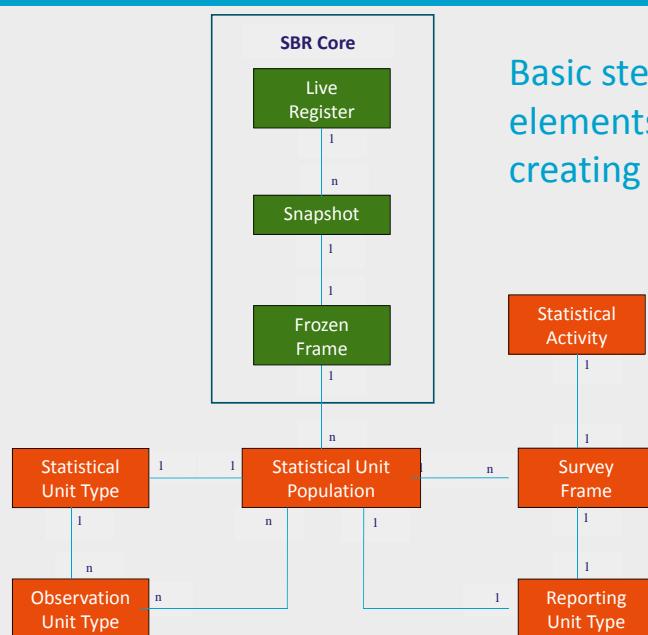

Relationships between relevant units

7

2.4 Design frame and sample methodology

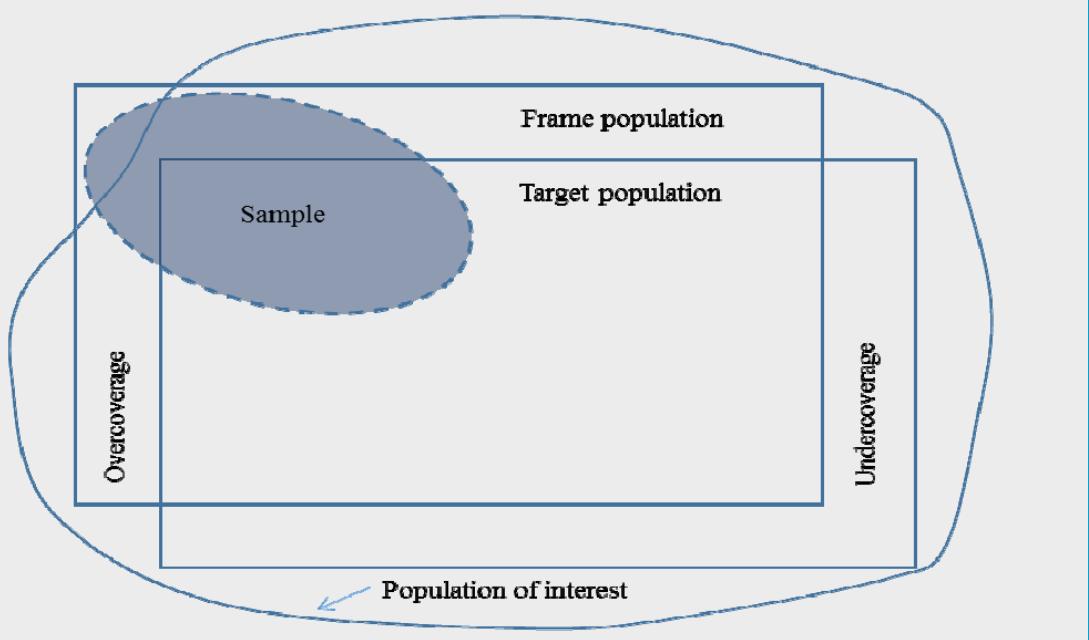

Basic steps and data elements involved in creating a survey frame

8

Target populations, frames and coverage
