

Exercise lesson 3:

- 1- A register based survey consists of the practice of procuring and processing data from administrative registers from different sources to be suitable for statistical purposes.
- 2- Census micro-data is a potential basis for register-based surveys
- 3- Statistical surveys conducted by NSOs may be included in the register system
- 4- It is essential that statistical offices ensure, through communication with register keepers, that all their needs are met before administrative data are delivered to their agency.
- 5- Which of the following activities is carried out during “matching and selection” phase of register-statistical processing?
 - a) Identifying individuals in one household
 - b) Aggregating all sources of income for one individual
 - c) Linking information for one individual from different sources
 - d) None of the above
- 6- The fact that register-based surveys link different sources of administrative data increases the measurement error in this kind of surveys compared to sample surveys.
