

Compilation of valuation matrices

Regional Course on Supply and Use Tables
Chiba, Japan
20-24 January 2020

Benson Sim
United Nations Statistics Division

Outline of presentation

- What is the valuation matrix?
- Relationship between basic prices and purchasers' prices
- Transformation of the use table from purchasers' prices to basic prices
- Estimating valuation matrices in practice

What is the valuation matrix?

Introduction

Fundamental SUT product identity

Supply

Demand

Introduction

Output is measured @ basic prices

Reflects revenue producers receive

Intermediate and final use tables are valued @ purchasers' prices

Reflects what purchasers pay

The valuation matrix

Output @ basic prices

Valuation matrix

Output @ purchasers' prices

Intermediate and final use tables are valued @ purchasers' prices

Supply and use tables @ purchasers' prices

Products	Supply											Use																			
	Output of industries						Total industry outputs	Imports	Supply @ basic prices	Valuation				Supply @ purchasers' prices	Inputs of industries						Total industry inputs	Final uses				Total final use	Use @ purchasers' prices				
	Agriculture, forestry, and fishing	Mining, quarrying and construction	Manufacturing	Trade and transport	Services	NPISH			Margins: total	Margins: transport	Margins: Wholesale	Fees on products	Subsidies on products		Agriculture, forestry, and fishing	Mining, quarrying and construction	Manufacturing	Trade and transport	Services	NPISH		Household expenditure (C)	Government expenditure (G)	NPISH expenditure	Gross capital formation (I)	Exports (E)

Total	65	420	531	373	1,058	421	36	2,905	469	3,374	0	0	0	111	-17	94	3,468

Key observations

Margin products (retail, wholesale, transportation)

Zero values in use tables

- Not strictly necessary, especially for directly purchased transportation services

Balanced

- Balancing item is negative entry in the valuation matrix = the total margin available

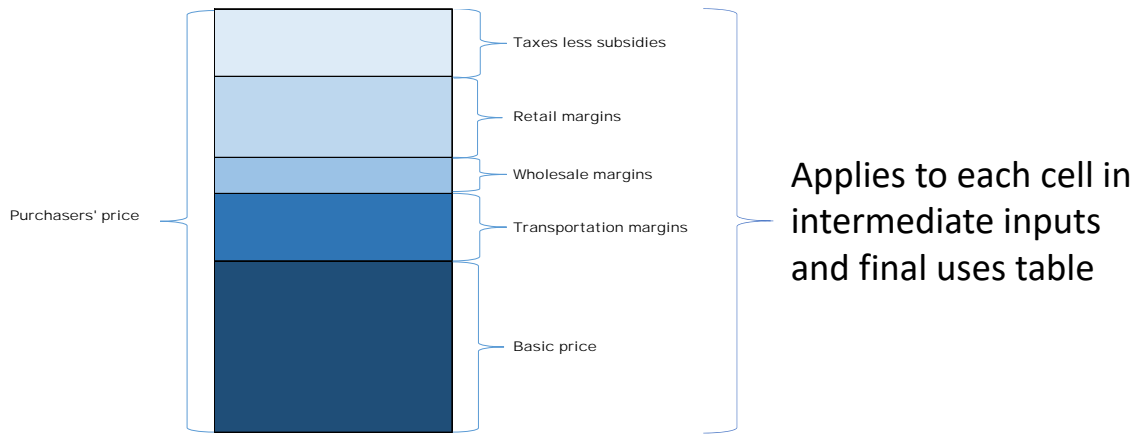

Relationship between basic price and purchasers' price

Valuation

Basic prices
+
Taxes on products excluding invoiced VAT
-
Subsidies on products
=
Producers' prices
+
VAT not deductible by the purchaser
+
Separately invoiced transport charges
+
Wholesalers' and retailers' margins
=
Purchasers' prices

Purchasers' price vs. basic price

From purchasers' prices to basic prices

From aggregate margin to detailed estimate

Purchasers' prices
SUTs show
measurable
aggregate sum of
margins on all use
categories

For certain
analytical purposes,
the SUTs
(specifically, the use
tables) need to be
converted into
basic prices

Constituent
margins and taxes
less subsidies of
each cell in the use
tables must be
calculated

Solution?

- Use a table of margin rates to calculate initial margins
- Prorate to match observable aggregate by product
- Update table of margin rates on an ongoing basis

Creating basic price estimates, illustration

	Purchaser	Margins		Basic
		Trade	Transportation	
Commodity 1	1,000	50	100	850
Commodity 2	2,000	100	200	1,700
Commodity 3	3,000	150	300	2,550
Commodity 4	4,000	200	400	3,400
Commodity 5	5,000	250	500	4,250
Commodity 6 (Trade)	0	0	0	750
Commodity 7 (Transportation)	0	0	0	1,500
	15,000	750	1,500	15,000

- For a non-margin product:
 - Basic = Purchaser – Sum of Margins on that cell
- For a margin product:
 - Basic = Sum of Margins corresponding to that margin product

Supply and use tables @ basic prices

- No valuation matrix in the supply table
- Margin services and taxes and subsidies on products appear explicitly in the use tables
- All products remain balanced (supply=use)
- Output, Imports, GVA matrices remain unchanged

Estimating valuation matrices in practice

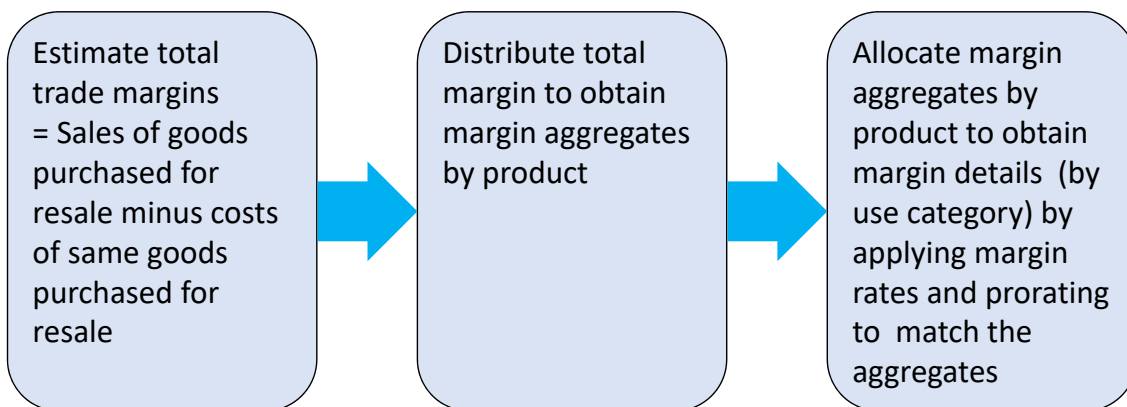

Example of margins in the SUTs

- Wholesale (8)
 - farm products
 - petroleum and petroleum products
 - food, beverages and tobacco products
 - personal and household goods
 - motor vehicles, motor vehicle parts and accessories
 - building materials and supplies
 - machinery, equipment and supplies
 - miscellaneous products
- Retail (11)
 - motor vehicles and parts
 - furniture and home furnishings
 - electronics and appliances
 - building materials, garden equipment and supplies
 - food and beverages
 - health and personal care products
 - automotive fuels
 - clothing and clothing accessories
 - sporting and leisure products
 - miscellaneous products
 - household fuels
- Transportation and storage (13)
 - Natural gas distribution
 - Transportation of crude oil and other commodities by pipeline
 - Transportation of natural gas by pipeline margins
 - Grain storage
 - Air freight transportation
 - Rail freight transportation
 - Water freight transportation
 - Truck transportation services for general freight
 - Truck transportation services for specialized freight
 - Water transportation support
 - Road transportation support
 - Freight transportation arrangement
 - Other transportation

General steps to estimate margins

Estimating margins – Illustrative example

STEP 1: Build Output, input, and final use tables

Margin	Use at purchasers' prices					
	Ind1	Ind2	Ind3	H+FCe	Exports	Other
Product1	12,079	1,003	28,552	73	1,239	318
Product2	2,410	30,446	70,744	7,038	24,201	121
Product3	11,246	65,766	152,826	16,843	28,141	42,406
Product4	1,329	3,607	8,351	30,251	7,768	38,219
Product5	5,978	58,071	30,754	74,861	207,376	53,935
Product6	3,705	6,004	17,655	18,899	52,951	0
Trade services	-200,000					

STEP 2: Distribute total margin to obtain margin aggregates by product

Margin	Use at purchasers' prices					
	Ind1	Ind2	Ind3	H+FCe	Exports	Other
Product1	15,000	12,079	1,003	28,552	73	1,239
Product2	10,000	2,410	30,446	70,744	7,038	24,201
Product3	60,000	11,246	65,766	152,826	16,843	28,141
Product4	5,000	1,329	3,607	8,351	30,251	7,768
Product5	80,000	5,978	58,071	30,754	74,861	207,376
Product6	30,000	3,705	6,004	17,655	18,899	52,951
Trade services	-					
	200,000					

STEP 3: Allocate margin aggregates by product to obtain margin details

Blueprint of margins						
Ind1	Ind2	Ind3	H+FCe	Exports	Other	
29%	27%	30%	29%	32%	29%	
2%	4%	5%	7%	1%	8%	
20%	20%	19%	24%	19%	17%	
2%	4%	2%	4%	0%	3%	
21%	18%	24%	19%	24%	17%	
35%	35%	31%	32%	35%	28%	

Blueprint * Use at purchasers' prices						
Ind1	Ind2	Ind3	H+FCe	Exports	Other	Total
3,503	271	8,566	21	397	92	12,849
48	1,218	3,537	493	242	10	5,548
2,249	13,153	29,037	4,042	5,347	7,209	61,038
27	144	167	1,210	0	1,147	2,695
1,255	10,453	7,381	14,224	49,770	9,169	92,252
1,297	2,101	5,473	6,048	18,533	0	33,452

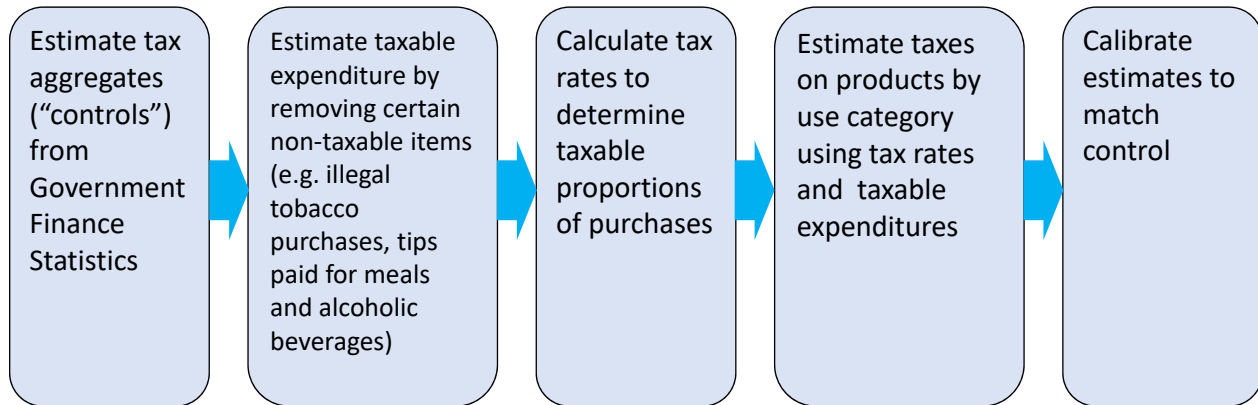

Prorate to equal margin aggregates						
Ind1	Ind2	Ind3	H+FCe	Exports	Other	Total
4,089	316	9,999	25	463	108	15,000
87	2,195	6,376	888	436	17	10,000
2,211	12,930	28,543	3,973	5,256	7,087	60,000
49	268	310	2,245	0	2,128	5,000
1,089	9,065	6,401	12,335	43,160	7,951	80,000
1,163	1,885	4,908	5,424	16,621	0	30,000

Example of taxes on products

- Federal (9)
 - Federal trading profits
 - Federal gas tax
 - Federal excise tax
 - Federal duty tax
 - Federal environment tax
 - Federal air transportation tax
 - Federal custom import duties
 - Federal sales tax (GST and HST)
 - Aboriginal trading profits
- Provincial (9)
 - Provincial environment tax
 - Provincial gallon tax
 - Provincial trading profits
 - Provincial gas tax
 - Provincial land transfer tax
 - Provincial amusement tax
 - Other provincial consumption taxes
 - Provincial sales tax
 - Provincial harmonized sales tax (HST)
- Municipal (3)
 - Municipal land transfer tax
 - Municipal amusement tax
 - Municipal sales tax

General steps to estimate taxes on products

Calculating applicable tax rates

- In order to determine what portion of the purchase of a product by businesses and households is taxable, tax rates are created to determine the taxable proportions of the cells in the use table
- These rates represent a translation from the legislation into the SUT framework
- They indicate what proportion of a purchase of a product is not taxable
- Everything is initially assumed to be 100% taxable
- Tax rates are created for exemptions, rebates, and input tax credits for each combination of product and industry and final use category
- These amounts are then deducted from the 100% to arrive at a final taxable proportion

Taxes on products – illustrative example

Taxable Proportion (TP) formula:

TP =

(1 – non taxable)

* 1 – exempt – zero rated
– POS rebate

* (1 – ITC)

* (1 – sector rebate)

* 1 – other rebate

- The table on the right shows the tax rate values for “Snack food products” for a) HFCE and b) Bakeries and tortilla manufacturing

		Snack food products	Snack food products
		HFCE	Use by bakeries industry
Non-taxable	Excluded or discounted from any tax treatment.	0%	
Zero-rated	Taxable at a rate of 0%. (companies that produce zero-rated supplies can claim ITCs on inputs used to produce them)	11%	11%
Exempt	Good or service is exempt from tax	0%	0%
POS rebate	Tax rebate applied at the point-of-sale	0%	0%
Other rebate	Product-specific VAT rebates other than point-of-sale	0%	0%
Input tax credit (ITC)	Tax credit given to companies that pay VAT on goods/services used in production to produce taxable goods/services.	0%	100%
Sector rebate	VAT rebates that specific public/private sector institutions (e.g. municipalities) or categories of consumers (e.g. First Nation communities, diplomats) are entitled to regardless of the product purchased.	0.45%	0%
Taxable proportion	Proportion of expenditure (less sales taxes) that is subject to tax	88.60%	0%

Estimation

- Non-sales taxes such as tobacco taxes, liquor taxes, and environment taxes, are allocated based on the expenditure weights after applying the taxable proportions
- Sales taxes (incl. VAT), are determined as follows:
 - $TAX = Expenditure \times \frac{LR_i \times TP_i}{\sum LR_i \times TP_i + 1}$, where
 - LR_i = Legal rate for government level i
 - TP_i = Taxable proportion for government level i

Summary

- The valuation matrix bridges the valuation difference between the domestic and foreign supply in basic prices, and the consumption in purchasers' prices
- The use table can be transformed from purchasers' prices into basic prices by calculating margins, taxes on products, and subsidies on products for every cell in the use table
- The valuation matrices may be estimated using a combination of survey data and calculated rates
