Turkey

Mapping exercise of Development Plan/SDG

Mapping results/complexities

- We selected Innovative Production, Stable And High Growth pillar among four pillars of Development Plan
- 9 outcomes and 10 indicators
- Mapping result:
  - 2 indicators exactly matched
  - 8 indicators partially matched

- Complexities
  - Unclear indicators
  - Metadata uncertainties
  - Some national priorities doesn't covered by SDGs (role of Agricultural value added in inclusive growth)

Why not exactly mapped?

- We are able to complete mapping process for all national indicators but most indicators doesn't fully match with SDG indicators

What solutions you propose?

- Metadata of SDG indicators should be completed (i.e. 17.13.1. Macroeconomic dashboard)
- Continue national level studies for data gaps

What implications for your planners and statistical process

- By comparing national indicators with SDG indicators, gaps could be determined and planners could develop strategies to improve statistical process
- National priorities and constraints will also be covered by proposing new indicators by doing studies (i.e. Special Expertise Committees, National Human Development Reports, etc.) with all stakeholders
