

# National **Quality** Assurance Frameworks

## Regional Workshop on Measuring the Informal Sector and the Non-Observed Economy

4-7 October 2015

Tehran, Islamic Republic of Iran

United Nations Statistics Division

1

## National Quality Assurance Frameworks (NQAF) - Outline -

- I. What is quality?
- II. Endorsement of NQAF
- III. The NQAF template
- IV. NQAF guidelines (section 3 examples)
- V. NQAF references
- VI. NQAF analytics
- VII. Way forward

2

## I. What is quality?

- Vague concept, with different meaning depending on the context
- ISO 9000 Quality Management System:
  - The degree to which a set of inherent characteristics fulfills requirements
- In the NSO context, QUALITY is defined as FITNESS FOR USE, in terms of user needs - - how well the agencies' products meet user needs, whether they are "fit for use" or fit for the purpose for which they are to be used
- The NSO's product is the INFORMATION it disseminates (facts to be used for decision-making by governments, businesses, institutions, the public); the focus here is on Information Quality

3

## I. What is quality?

**Not too long ago, quality in official statistics focused on a single dimension:**

**Quality = ACCURACY**

**but there are other dimensions to consider...**

4

## I. What is quality?

- Are data useful/of good quality if, they are:
  - accurate, but too late to be useful?
  - accurate, but are not easily accessible by potential users?
  - accurate, but from unknown/unverifiable sources?
  - accurate, but conflict with other data?
  - accurate, but not provided on a regular basis?
  - accurate, but not really show what is needed?

## I. What is quality?

**A**  
**multi-faceted,**  
**multi-dimensional**  
**concept**

## II. Endorsement of NQAF

- 43<sup>rd</sup> session of the Statistical Commission fully endorsed the generic national quality assurance framework template and encouraged countries to use it
- The initiative for an NQAF originated from a Statistics Canada report at the 41<sup>st</sup> session of the Statistical Commission

7

## III. The national quality assurance framework (NQAF) **template**

The framework template is: (page 4 of the Guidelines document)

- Arranged in five sections
  - (1) quality context
  - (2) **quality concepts and frameworks**
  - (3) **quality assurance guidelines**
  - (4) quality assessment and reporting
  - (5) quality & other management frameworks
- Has been based on the 3 proposals Statistics Canada had made in its report to the 41<sup>st</sup> session of Statistical Commission
  - The resulting NQAF template is a combination with some additions

“Fitness for use” / “Fitness for purpose”

Quality is all about providing goods & services that meet the needs of users

8

# III. The national quality assurance framework (NQAF) **template**

United Nations Statistics Division

## 1. Quality context

- 1a. Circumstances and key issues driving the need for quality management
- 1b. Benefits and challenges
- 1c. Relationship to other statistical agency policies, strategies and frameworks and evolution over time

## 2. Quality concepts and frameworks

- 2a. Concepts and terminology
- 2b. Mapping to existing frameworks

## 3. Quality assurance guidelines

### 3a. Managing the statistical system

- [NQAF 1] Coordinating the national statistical system
- [NQAF 2] Managing relationships with data users and data providers
- [NQAF 3] Managing statistical standards

### 3b. Managing the institutional environment

- [NQAF 4] Assuring professional independence
- [NQAF 5] Assuring impartiality and objectivity
- [NQAF 6] Assuring transparency
- [NQAF 7] Assuring statistical confidentiality and security
- [NQAF 8] Assuring the quality commitment
- [NQAF 9] Assuring adequacy of resources

### 3c. Managing statistical processes

- [NQAF 10] Assuring methodological soundness
- [NQAF 11] Assuring cost-effectiveness
- [NQAF 12] Assuring soundness of implementation
- [NQAF 13] Managing the respondent burden

### 3d. Managing statistical outputs

- [NQAF 14] Assuring relevance
- [NQAF 15] Assuring accuracy and reliability
- [NQAF 16] Assuring timeliness and punctuality
- [NQAF 17] Assuring accessibility and clarity
- [NQAF 18] Assuring coherence and comparability
- [NQAF 19] Managing metadata

## 4. Quality assessment and reporting

- 4a. Measuring product and process quality - use of quality indicators, quality targets and process variables and descriptions
- 4b. Communicating about quality – quality reports
- 4c. Obtaining feedback from users
- 4d. Conducting assessments; labelling and certification
- 4e. Assuring continuous quality improvement

## 5. Quality and other management frameworks

- 5a. Performance management
- 5b. Resource management
- 5c. Ethical standards
- 5d. Continuous improvement
- 5e. Governance

9

# III. The NQAF **template** - and **mapping** to existing frameworks

United Nations Statistics Division

•So as not to “re-invent the wheel”, the template draws heavily upon the work of Eurostat, IMF and StatCan  
The template is aligned with (mapped to) the other well-known quality frameworks

- European Statistics Code of Practice (CoP)
- International Monetary Fund’s Data Quality Assessment Framework (DQAF)
- Statistics Canada's quality assurance framework
- (and the newer) Proposal for the Structure of a Regional Code of Good Statistical Practice for Latin America and the Caribbean

10

### III. The NQAF template:

The NQAF template's section 3 has been based on Statistics Canada's 2010 Statistical Commission report's 3 proposals (cols 1,3)

United Nations Statistics Division

#### Quality Assurance Procedures

European Statistics Code of Practice (CoP)*	International Monetary Fund's Data Quality Assessment Framework (DQAF)*	Statistics Canada Quality Assurance Framework (StatCan)*	Latin America & the Caribbean Regional Code of Good Statistical Practice (LAC proposal)

### III. The national quality assurance framework (NQAF) **template**

United Nations Statistics Division

- Voluntary, not mandatory
- Flexible to permit national circumstances to be taken into consideration; application of ALL components of the template not necessarily expected; not prescriptive
- A starting point on which to build/modify as necessary
- A useful organizing framework
- A framework created **by** the national agency **for** the national agency

13

### IV. NQAF template **GUIDELINES**

United Nations Statistics Division

- **Guidelines** – a kind of checklist, focusing on section 3, the numbered “NQAF lines” (other sections intentionally briefer, more general)
- For each numbered NQAF line (1-19):
  - Description (what? “... agencies should minimize delays in making data available...” )
  - Elements to be assured (which?)  
(roughly ordered by levels or stages)
  - Supporting mechanisms (how?)
  - Selected references (where?)

Some repetition across different NQAFs - underscores the multi-dimensional aspect of quality and allows users to use parts of the framework independently. (e.g. use of sample surveys instead of censuses, when possible & appropriate – in cost-effectiveness (11) and managing respondent burden (13))
- Helpful to:
  - Data providers in designing a statistical collection or product or reviewing existing ones
  - Data users in making informed decisions about the statistics produced

Are the data fit for the purpose they are intended to be used?

14

## NQAF 3: Managing statistical standards

### Description:

#### Standards:

- a comprehensive set of statistical concepts and definitions used to achieve uniform treatment of statistical issues - within a survey or across surveys, and across time and space
- assist in maximizing the effectiveness of statistical outputs and the efficiency of the production process in terms of inter-temporal, national and international comparability and coherence (i.e. the capacity for integration) of the statistics.

While comparability and coherence are important for any dataset, they are particularly important where data are obtained from multiple sources and have to be combined or where outputs are used in a wide variety of contexts. The use of standard collection units (families, households, businesses, etc.) helps the compilation, comparison and dissemination of statistics for these standardized units.

Statistical agencies should aim to use consistent names and definitions for populations, statistical units, concepts, variables, and classifications in their statistical programmes/domains.

# NQAF 3: Managing statistical standards

United Nations Statistics Division

## Elements to be assured:

Agency works towards developing statistical standards
<b>Collaboration:</b> with other agencies in developing, reviewing, promoting & implementing statistical standards
<b>Person(s) responsible:</b> for leading development of standards & supporting programmes to develop new or updated ones; staff assigned responsibility has the appropriate level of authority
<b>Monitoring:</b> extent that statistical standards are used by the programmes; senior management is given periodic reports
<b>Informing staff and users:</b> about statistical standards & changes made to them
<b>Collaboration:</b> data users & data providers & the agency's own statistical programmes are involved in creating, developing & approving statistical standards
<b>Inclusion of (in standards):</b> a statement of conformity to corresponding international or national standards
<b>Divergences:</b> from the corresponding international or national statistical standards are documented & explained
<b>Detailed concordances</b> to corresponding int'l & national standards
<b>Detailed concordances</b> to previous standards

## Mechanisms/examples:

- Central organizational units or senior level groups responsible to lead & coordinate the development, implementation, maintenance & use of statistical standards
- [Active participation with other national & international organizations](#) in the development, review, promotion & implementation of statistical standards (e.g. employees attend workshops, conferences & seminars at the national and international levels) *(hyperlink to examples: UNSD and Mexico)*
- [Notice of introduction of a new aggregation structure for the classification of imports and exports of goods](#) *(hyperlink to example: Canada)*
- Active participation of both data users & providers in the development & approval of statistical standards
- [Correspondence tables for classifications](#) exist and are kept up-to-date & made available to the public with explanatory information *(hyperlink to example: UNSD)*

17

# NQAF 3: Managing statistical standards

United Nations Statistics Division

## Elements to be assured:

<b>Conceptual frameworks used:</b> e.g. <a href="#">SNA</a> , that provide a basis for consolidating statistical information about certain sectors or geographical entities <i>(hyperlink to example: UNSD)</i>
<b>Integrated statistics programmes</b> are developed that require statistical standards
<b>Compliance</b> with required application: programmes are held accountable to apply the standards
<b>Non-compliance</b> with required application: programmes have to obtain exemptions from standards if they do not apply them
<b>Informing statistical programmes/domains:</b> plans (and deadlines) for the development & application of new statistical standards are communicated well in advance
<b>Level of information:</b> to provide maximum flexibility in aggregation & to facilitate retrospective reclassification, statistical programmes collect & retain information at the fundamental or most detailed level of each standard classification, to the extent possible
<b>Informing users and the public:</b> all potential data users & the public
<b>Review and revision:</b> standards are regularly reviewed & revised, if necessary, to ensure their quality, notably their relevance, coherence & clarity

## Mechanisms/examples:

- Statistical programmes based on conceptual frameworks or [data integration frameworks](#) that rely heavily on statistical standards *(hyperlink to example: Australia)*
- [Upcoming Reviews](#) *(hyperlink to example: Australia)*
- [Documentation:](#) on the statistical standards used is included in statistical products or explicitly referred to and is readily accessible *(hyperlink to example: Canada)*

18

# NOAF 3: Managing statistical standards

United Nations Statistics Division

## Examples: System of National Accounts 2008 - 2008 SNA

<http://unstats.un.org/unsd/nationalaccount/sna2008.asp>

**System of National Accounts 2008 - 2008 SNA**

**About the 2008 SNA**

The *System of National Accounts 2008* (2008 SNA) is the latest version of the international statistical standard for the national accounts, adopted by the United Nations Statistical Commission (UNSC).

The 2008 SNA is an update of the *System of National Accounts, 1993* (1993 SNA). The update was in 2003 entrusted to the *Intersecretariat Working Group on National Accounts* (ISWGNA) to address issues brought about by changes in the economic environment, advances in methodological research and the needs of users.

The first seventeen chapters of the 2008 SNA comprising the accounting rules, the accounts and tables, and their integration were adopted by the UNSC in 2009, chapters 18 to 29, comprising the interpretations and extensions of the accounts and tables of the System, were adopted by the UNSC in 2009.

The 2008 SNA is the result of a process that was notable for its transparency and the wide involvement of the international statistical community, both of which were made possible by the innovative use of the project's website *Towards 2008 SNA* as a communication tool. In its adoption of the 2008 SNA the UNSC encouraged Member States, regional and sub-regional organizations to implement its recommendations and use it for the national and international reporting of national accounts statistics.

Being a conceptual framework, the 2008 SNA does not attempt to provide comprehensive compilation guidance on how to make estimates nor is it descriptive in setting priorities which accounts and tables should be implemented or expresses norms on the frequency and format of their presentation. For practical compilation guidance, international agencies have developed separate handbooks like the *handbooks of national accounting* prepared by the United Nations Statistics Division.

A number of research issues have emerged during the update of the 1993 SNA, but where more extensive consideration is needed than what was possible in the course of the update process. These issues are listed in Annex 4 of the 2008. More information on these and emerging research issues and recommendations on the outcome of the research can be found at under the *Research agenda*.

# NQAF 8: Assuring the quality commitment

United Nations Statistics Division

## Description:

Statistical agencies should be dedicated to assuring quality in their work, and systematically and regularly identify strengths and weaknesses to continuously improve process and product quality.

Processes, staff and facilities should be in place for ensuring that the data produced are commensurate with their quality objectives.

# NQAF 8: Assuring the quality commitment

United Nations Statistics Division

## Elements to be assured:

<b>Commitment</b> to quality: policy or message is made public
<b>Person(s) responsible</b>
<b>Guidelines</b> for implementing quality management w/in the statistical production process: describing a) entire process & documentation; b) methods for monitoring the quality of stages; c) identification of indicators (quality measures) for evaluating the quality of the main stages
<b>Guidelines</b> made available to external users (at least a summary)
<b>Externally-recognized processes</b> or activities that focus on quality are followed
Procedures put in place for <b>monitoring</b> and reporting on <b>product quality</b> ; top management gets informed of the results in order to define improvement actions; <b>quality reviews</b> of key products regularly conducted
<b>Documentation</b> on quality is required & regularly updated
<b>Training &amp; development</b> programmes: agency's quality policy & how quality may be achieved

## Mechanisms/examples:

- Quality policy**, declaration or commitment statement
- Staff awareness "campaign" to emphasize commitment (*hyperlink to example: Lithuania*)
- Quality manager, committee, unit, coaches or advisers
- Guidelines, methodological manuals**, etc.; **GSBPM** - for guidance on managing & monitoring the quality of all stages of the statistical process (*hyperlink to examples: Eurostat, GSBPM*)
- Use of TQM, ISO 9000, quality initiatives of the ESS, independent evaluations and/or **IMF ROSC** evaluations (*hyperlink to IMF*)
- Programmes set up for carrying out quality reports, self-assessments, audits, user satisfaction surveys - to monitor & report on quality over time
- Work plans, schedules & standard forms or templates - for facilitating the consistent updating of the documentation
- Regularly held training courses designed to support quality policy

Agency level	Programme design	Programme implementation	Post-collection evaluation
--------------	------------------	--------------------------	----------------------------

# NQAF 8: Assuring the quality commitment

United Nations Statistics Division

## Elements to be assured:

<b>Support:</b> to subject matter units by specialized (methodological & IT) units to help implement improvements
<b>Benchmarking:</b> of key statistical processes with other agencies carried out to identify good practices
<b>Quality assurance plan</b> or similar mechanism for planning and monitoring the quality of different stages of the process; describes the working standards, formal obligations (laws & internal rules) & quality control actions to prevent/ monitor/evaluate errors & to control different points at each stage. Taken into account here are: <ul style="list-style-type: none"> <li>• users' needs and relevance of the statistical operation</li> <li>• examination of possible trade-offs among quality dimensions <small>(hyperlink to above example: France)</small></li> <li>• assurance of the quality of data collection (incl. use of admin. data) &amp; data editing</li> </ul>
<b>Metadata &amp; quality indicators</b> or measures: prepared & provided to users to help them assess the quality of the released data <small>(hyperlink to example: Eurostat ESMS)</small>
<b>Evaluation:</b> quality reviews are conducted
<b>Users' reactions and feedback:</b> collected; to be used as inputs to action plans

## Mechanisms/examples:

<input type="checkbox"/> IT staff, methodologists and other specialists (e.g. in questionnaire design) participate in assisting subject matter units; appropriate software is provided
<input type="checkbox"/> Validation techniques are widely promoted and applied
<input type="checkbox"/> Expert groups are established & meetings held regularly
<input type="checkbox"/> Documentation on methods, concepts and definitions is made available for all major fields of statistics
<input type="checkbox"/> User satisfaction surveys carried out; reports on the results are made publicly available
<input type="checkbox"/> User-oriented quality reports are produced & made available to the public; producer-oriented reports are produced; can be used by agency to monitor quality over time
<input type="checkbox"/> External experts may conduct quality reviews of key statistical domains (e.g. IMF's ROSCs, peer reviews, external audits & rolling reviews)

Agency level	Programme design	Programme implementation	Post-collection evaluation
--------------	------------------	--------------------------	----------------------------

# NQAF 8: Assuring the quality commitment

United Nations Statistics Division

## Examples: IMF's Reports on the Observance of Standards and Codes (ROSCs)

<http://www.imf.org/external/NP/rosc/rosc.aspx>

## Reports on the Observance of Standards and Codes (ROSCs)

ROSCs summarize the extent to which countries observe certain internationally recognized standards and codes. The IMF has recognized 12 areas and associated standards as useful for the operational work of the Fund and the World Bank. These comprise accounting; auditing; anti-money laundering and countering the financing of terrorism (AML/CFT); banking supervision; corporate governance; data dissemination; fiscal transparency; insolvency and creditor rights; insurance supervision; monetary and financial policy transparency; payments systems; and securities regulation; AML/CFT was added in November 2002. Reports summarizing countries' observance of these standards are prepared and published at the request of the member country. They are used to help sharpen the institutions' policy discussions with national authorities, and in the private sector (including by rating agencies) for risk assessment. Short updates are produced regularly and new reports are produced every few years.

# NQAF 11: Assuring cost-effectiveness

United Nations Statistics Division

## Description:

Statistical agencies should assure that resources are effectively used. They should be able to explain to what extent the set objectives were attained and that the results were achieved at a reasonable cost consistent with the principal purposes for which the statistics will be used.

# NQAF 11: Assuring cost-effectiveness

United Nations Statistics Division

## Elements to be assured:

## Mechanisms/examples:

<b>Standardization:</b> standardized solutions that increase effectiveness & efficiency	<input type="checkbox"/> Standardization programmes and procedures are defined and implemented in key areas according to the business process model <input type="checkbox"/> Indicators of human and financial resources - monitored centrally and regularly reported
<b>Monitoring:</b> of the agency's use of resources, both by internal and independent <a href="#">external measures</a> <small>(<i>hyperlink to example: France</i>)</small>	<input type="checkbox"/> Accounting systems allow allocation of resources to statistical operations <input type="checkbox"/> Human resources (allocation, performance and staff training needs) are evaluated annually
<b>Costs:</b> of producing the statistics, at each stage of statistics production, are regularly reviewed and <b>documented</b> to assess their effectiveness	<input type="checkbox"/> Staff opinion surveys - conducted regularly <input type="checkbox"/> IT infrastructure - reviewed regularly
<b>Cost-benefit</b> analyses: carried out to determine the appropriate <b>trade-offs</b> in terms of data quality	<input type="checkbox"/> Ex-ante cost calculation procedures are available for statistical operations <input type="checkbox"/> Appropriate arrangements (e.g. SLAs agreements or national legislation) are signed with owners of administrative data collections and regularly updated
<b>Administrative data:</b> proactive efforts made to improve the statistical potential of administrative data and to limit recourse to direct surveys	<input type="checkbox"/> An assessment of possible administrative data sources is carried out prior to launching any new survey <input type="checkbox"/> Data linking and integration methods are proactively pursued subject to data security considerations
<b>Administrative data:</b> - instead of sample surveys – are used when it is appropriate and possible	<input type="checkbox"/> Quality indicators are developed and compiled to improve the use of administrative data for statistical purposes <input type="checkbox"/> Procedures are in place to measure and manage the respondent burden
<b>Respondent burden:</b> is managed	
<b>New data collection:</b> when contemplated - review whether current data sources can be utilized instead	

# NQAF 11: Assuring cost-effectiveness

United Nations Statistics Division

## Elements to be assured:

Review	<b>Review ongoing programmes:</b> to consider whether a particular programme is still operating in the most cost-effective way to meet its stated requirements
IT	<b>IT:</b> review whether its productivity potential being optimized for data collection, processing and dissemination
Reporting burden minimization	<b>Reporting burden minimization:</b> keeping in mind the principal purposes for which the statistics will be used
Automation	<b>Automation:</b> of routine clerical operations (e.g. data capture, coding, validation) where possible
Cost-effectiveness assessment	<b>Cost-effectiveness assessment:</b> undertaken for every statistical survey
User feedback	<b>User feedback:</b> to verify whether outputs produced continue to meet the needs of the key users so as to justify the collection of the data

## Mechanisms/examples:

- Centralized IT and methodological units provide possibilities for the pooling of resources and investments and the identification of innovation/modernization potential
- An appropriate IT architecture and strategy exists and is regularly updated
- Policies, procedures and tools exist to promote automatic techniques for data capture, data coding and validation
- The use of automated processing techniques is regularly reviewed
- Procedures are in place to measure and manage the respondent burden
- User satisfaction surveys

# NQAF 11: Assuring cost-effectiveness

United Nations Statistics Division

**Examples:** *INSEE is audited by the French Court of Auditors and the General Finance Inspectorate: on this subject, see the "INSEE International Comparative Analysis" Report ([http://www.insee.fr/en/insee-statistique-publique/qualite/report\\_igf.pdf](http://www.insee.fr/en/insee-statistique-publique/qualite/report_igf.pdf))*

Paris, December 27, 2004

### Main findings of the international comparative study of INSEE

Introduction	1
1 – The study tends to confirm the overall organization of the French official statistical system	2
1.1 – A system in which statistics, as everywhere else, are a national public service	2
1.2 – A system that is less decentralized	2
1.3 – A system that is better coordinated	2
1.4 – A national institute with a broader range of missions	3
2 – The cost/quality ratio of the French system compares favorably to that of other countries	3
2.1 – Costs are close to the average of the sample	3
2.2 – Product quality is internationally recognized	4
2.3 – The quantity produced, though difficult to measure, does not seem lower than that of the referenced countries	4
3 – INSEE's governance differs from that of the other institutes	5
3.1 – INSEE's independence has the fewest legal basis	5
3.2 – Yes, in fact, it seems to have the greatest autonomy	5
3.2.1 – The lack of reporting	5
3.2.2 – The lack of a collegial supervisory body	5
3.2.3 – The lack of strategic perspectives in budgetary discussions	6
4 – INSEE's management is good, but can be improved	7
4.1 – Continuing to specialize the regional offices	7
4.2 – Implementation of new tools for demand control	7
4.3 – A more systematic approach to modernization of the production system	8
4.4 – Getting involved in Total Quality Management	9
4.5 – A broadened range of indicators	9
4.4.1 – An effort to monitor the evolution of productivity	9
4.4.2 – Indicators focusing more on external views of the institute, such as users satisfaction and response burden	10
Conclusion	11

# NQAF 16: Assuring timeliness and punctuality

United Nations Statistics Division

## Description:

Statistical agencies should minimize the delays in making data available.

Timeliness refers to how fast - after the reference date or the end of the reference period - the data are released or made available, whether for dissemination or for further processing.

Punctuality refers to whether data are delivered on the dates promised, advertised or announced (for example, in an official release calendar).

# NQAF 16: Assuring timeliness and punctuality

United Nations Statistics Division

## Elements to be assured:

## Mechanisms/examples:

<b>Release policy:</b> to describe release procedures and define timeliness targets
<b>Dissemination standards</b> or other relevant <b>timeliness targets:</b> for released data to comply with <i>[Action plans: developed and followed if the timeliness targets are not met]</i>
<b>Release calendar:</b> published to announce in advance the dates that (major) statistics are to be released <i>[User notifications: about any divergences from the advance release calendar; to announce the new release time and explain the reasons for the delays]</i>
<b>Monitoring and evaluation procedures:</b> for regularly tracking and evaluating the <b>punctuality</b> of each release as per the release calendar
<b>User requirements:</b> to be taken into account when the <b>periodicity</b> of the statistics is being decided
<b>Released data:</b> to be made available to all users at the same time <i>[If not, and privileged pre-release access is given, it is limited, controlled and publicized]</i>

- A publicly available written release or [dissemination policy](#), distinguishing between different kinds of statistical outputs (press releases, statistics-specific reports or tables, general publications, etc.) *(hyperlink to example: Chile)*
- International/national standards, e.g. [IMF data dissemination standards](#) *(hyperlink to example: IMF)*
- A law or other formal provisions exist that requires the setting of a release calendar
- The public is informed about the statistics being released via [release calendars](#); calendars also include information on how the data can be accessed (e.g. through the Internet, in publications, etc.) *(hyperlink to example: Italy)*
- Quality indicators on timeliness and punctuality are regularly calculated, monitored and disseminated.
- Procedures for consulting with users about periodicity are in place.

# NQAF 16: Assuring timeliness and punctuality

United Nations Statistics Division

## Elements to be assured:

<b>Trade-offs' consideration:</b> between timeliness and other dimensions of quality (e.g. accuracy, cost and respondent burden)
<b>Preliminary data release:</b> consideration is given to its possibility and usefulness, while at the same time taking into account the data's accuracy
<b>Contingency planning:</b> for handling emerging problems that could delay the release of data
<b>Schedules and timing:</b> attainable schedules for the production processes are defined
<b>Schedules and timing:</b> for specifying and making known to staff and users the maximum acceptable amount of time that can elapse - between the end of the reference period and the availability of the data
<b>Agreements with data providers:</b> on the planned delivery dates
<b>Procedures in place:</b> to ensure the effective and timely flow of data from providers
<b>Following-up with data providers:</b> to ensure timely receipt of data
<b>Preliminary data:</b> when released, are clearly identified as such; users are provided with appropriate information to be able to assess the quality of the preliminary data
<b>Revision policy:</b> to describe the revisions for those key outputs that are subject to scheduled revisions
<b>Quality indicators:</b> on timeliness and punctuality are regularly calculated, monitored, published and followed up

## Mechanisms/examples:

- ☐ Guidelines are available on how to deal with delays when using administrative data for statistical purposes.
- ☐ Respondents are made aware and reminded of the deadlines set for reporting.
- ☐ A published [revision policy](#) exists ([hyperlink to example: Portugal](#))
- ☐ [Quality indicators on timeliness and punctuality](#) are regularly calculated, monitored and disseminated ([hyperlink to example: Eurostat](#))

# NQAF 16: Assuring timeliness and punctuality

United Nations Statistics Division

## Examples: IMF's Dissemination Standards Bulletin Board

The screenshot shows the IMF's Dissemination Standards Bulletin Board (DSBB) website. The main content is a table titled "Special Data Dissemination Standard" which summarizes the data dimension of the Standard. The table is organized into columns for Coverage, Periodicity, and Timeliness. The Coverage column is further divided into Prescribed and Encouraged categories. The table lists various data categories such as Real sector, National accounts, Production index, and Labor market, along with their components, prescribed/encouraged categories, and periodicity/timeliness indicators.

Coverage			Periodicity	Timeliness
Prescribed	Encouraged categories and/or components			
Category	Components			
<b>Real sector</b>				
National accounts: nominal, real, and associated prices *	GDP by major expenditure category and/or by productive sector	Saving, gross national income	Q	Q
Production index/ indices #	Industrial, primary commodity, or sector, as relevant		M (or as relevant)	6W (M encouraged, or as relevant)
		Forward-looking indicator(s), e.g., qualitative business surveys, orders, composite leading indicators index	M or Q	M or Q
Labor market	Employment, unemployment, and wages/ earnings, as relevant		Q	Q

**Accessibility**

**Definition:** The ease and conditions under which statistical information can be obtained.

**Context:** Accessibility refers to the availability of statistical information to the user. It includes the ease with which the existence of information can be ascertained, as well as the suitability of the form or medium through which the information can be accessed. The cost of the information may also be an aspect of accessibility for some users.  
Accessibility refers to the physical conditions in which users can obtain data: where to go, how to order, delivery time, clear pricing policy, convenient marketing conditions (copyright, etc.), availability of micro or macro data, various formats (paper, files, CD-ROM, internet), etc.

**Source:**

- SDMX (2009)

**Hyperlinks:**

- <http://www.sdmx.org/>

**Accuracy**

**Definition:** Closeness of computations or estimates to the exact or true values that the statistics were intended to measure.

**Context:** The accuracy of statistical information is the degree to which the information correctly describes the phenomena. It is usually characterized in terms of error in statistical estimates and is often decomposed into bias (systematic error) and variance (random error) components. Accuracy can contain either measures of accuracy (numerical results of the methods for assessing the accuracy of data) or qualitative assessment indicators. It may also be described in terms of the major sources of error that potentially cause inaccuracy (e.g., coverage, sampling, non response, response error). Accuracy is associated with the "reliability" of the data, which is defined as the closeness of the initial estimated value to the subsequent estimated value.  
This concept can be broken down into: Accuracy - overall (summary assessment); Accuracy - non-sampling error; Accuracy - sampling error.

## VI. NQAF analytics

United Nations Statistics Division

- Latest tool to be developed is a **checklist** in Excel
- Complements the supporting mechanisms in the guideline document
- Reduces some (intentional) duplication in the guideline document
- Around 250 questions
  - Yes – No – Partially – N/A
- Integrated analytics/visualization tools

36
